

BrightBridge Payroll Answers

Tax Filing and Compliance

1. Payroll tax filings - Do you automatically file and pay quarterly Form 941 returns, annual Form 940 returns, state unemployment returns, and W-3 transmittals on behalf of clients? Or does the employer need to handle these filings separately outside of Rollfi?

A. Yes we handle all three of these. We require accurate state registration info for businesses to file the unemployment returns.

2. Local income taxes - Do you automatically handle local income taxes, specifically New York City local income tax for employees working in NYC and any applicable New Jersey local taxes? Our client base is primarily New Jersey and New York daycare centers, so this is an important compliance requirement for us.

A. Yes these are all handled by Rollfi, both on the employer and employee side. Importantly, the company must have accurate state registration information for us to pay/file and calculate accurate employer state taxes. (please take a look at <https://developer.rollfi.xyz/api-reference/adminportal/addStateRegistrationInfo#addstater egistrationinfo>)

3. New hire state reporting - Do you automatically handle new hire state reporting when a new employee is added to the system? This is a mandatory state requirement in both New Jersey and New York.

A. No, this is more of an HR function and would need to be handled on your end.

4. ACA filing - Do you support ACA 1095-C filing for larger employers?

A. Not currently. It's not currently on the roadmap, but please let us know if you see this being a common use case and we can recommend ways/partners to help you do this.

Payment Methods

5. Pay cards - Do you support pay cards as a payment method for employees who do not have bank accounts? We could not find this listed in the documentation alongside direct deposit and check options.

A. This isn't something we support. We only pay out through direct deposit and check

6. On-demand pay / Earned Wage Access - Do you offer on-demand pay or Earned Wage Access, where employees can access earned wages before the official pay date? If this is not currently available, is it on your roadmap?

A. This is not something we currently support or plan to support.

Employee Self-Service

7. White-labeled or embedded employee experience - We found the employee portal APIs for pay stubs, W-4 updates, bank account management, and time off requests. Can this employee experience be white-labeled or embedded directly into our BrightBridge platform? Ideally, we would like employees to access everything through one BrightBridge login without being redirected to a separate Rollfi-hosted URL.

A. We can provide an SSO endpoint to exchange the user's email and role for a secure link to Rollfi - this would be whitelabeled to have brightbridge branding. We recommend creating a popup rather than embedding directly since we have a sidebar which may provide a confusing UX with the menus you already have in your application

HR and Onboarding

8. I-9 and E-Verify - We understand that I-9 verification and E-Verify are likely outside of Rollfi's scope. Could you confirm this so we can plan to build or integrate these separately within our platform?

A. We're aiming to release this through the API in Q4. Please could you explain your use case and average company size? We're currently integrating, but depending on what depth of functionality you need (e.g. admin control over sending/viewing I-9 documents, employee portal linkout to complete I9 signing etc.) we may be able to provide the functionality you need earlier.

Beneficial Ownership

9. Beneficial owner setup - Following your feedback on our integration review, we are updating our onboarding flow so that each daycare center client has their actual business owner listed as the beneficial owner, rather than our platform admin, Joanne. To confirm our understanding: Joanne should manage cross-company access using `getCompanies` on our side, rather than being onboarded as a beneficial owner for each individual client company. Is this the correct approach?

- A. To clarify, since you control the access on your side you can build out a super admin role very easily. `getCompanies` returns every company in your workspace and the `CompanyId` can then be used to perform every action through the api, just as you resolve an admin user (customer) for their Company when they initially login. This is a cleaner implementation and avoids having duplicate Joanne accounts/records on our end. Regardless of this we need the beneficial owner information to make sure the company passes KYB - we perform checks against name and SSN so its important this data is accurate.
