

BrightBridge Feedback

Thanks for providing us access to your integration, we appreciate the opportunity to see a real world deployment of our APIs and to take a look at your integration with EasyTeam. Our feedback is listed below.

Beneficial ownership

Right now, Joanne is listed as the beneficial owner for each company. I'm assuming this may just be sandbox data, but each company should have its actual beneficial owner listed.

The beneficial owner is checked as part of KYB, so this should be an owner of the business with at least 25% equity OR a C-level executive that can act as an authorized signer. Joanne may not need to be onboarded into each company in Rollfi at all. If she needs access across companies, you can likely manage that on your side — for example, by giving a super admin access to the relevant company IDs when calling `getCompanies`.

Removing and terminating employees

How are you planning to handle employees who should not be included in payroll?

For example, if an employee has no hours in Easy Team for a payroll, you may want to remove them from the open pay period using `removeUsersFromRegularPayPeriod`:

<https://developer.rollfi.xyz/api-reference/payroll/removeUsersFromRegularPayPeriod>

Separately, how are you planning to handle terminations? Rollfi has APIs for both temporary deactivation and full termination, depending on what the daycare is trying to do.

Payroll adjustments

I see Bonus and OT hours are included. Are you planning to support other adjustment types like reimbursements, retro pay, additional compensation, etc.?

Totally fine if not for the first version, but wanted to flag that those options are available if you want to support them later.

Employee syncing

There seems to be a small gap between the employees in Easy Team, BrightBridge, and Rollfi.

For example, I have `ali test` on our end for `Sunshine Daycare Centre`. Your side shows 3 of 4 active employees, but `ali test` does not seem to be tracked in your system.

It would be good to clarify how employee syncing is meant to work across the three systems. If I click “Add Employee” in Payroll, should that also create a profile in Easy Team? And does the reverse flow exist — for example, if an employee is added in Easy Team, should they sync into BrightBridge and Rollfi?

Also, how are employees in hiring or onboarding being tracked before they become active? From what you mentioned in Slack, some of those screens may come later, so this may not be an immediate issue, but we should make sure the intended flow is clear.

Wage decimal issue

We noticed what looks like a wage decimal issue.

On one side, the wage is showing as `$1800` per hour, while on the other it shows as `$18.00` per hour. It looks like the decimal may be getting dropped when wages are sent through the API, then added back when the value comes back from Rollfi.

This should be corrected, since it could cause a 100x difference in payroll amounts. The UI should ask for and display amounts in normal dollar format, like `18.00`.

Tax details and net pay

It does not look like tax details are being displayed for the employer or employee right now.

This could cause confusion because the gross wages shown in the UI will not match what employees actually receive. At minimum, I'd recommend showing the net total for each employee. Ideally, you would also show the individual employee tax line items.

Those tax details should also be included on paystubs so employees can see what was withheld.

Pay period totals

Some top-level pay period details also seem to be missing.

The main one is the debit total. In `getPayPeriodDetails`, this is the `total` field. The company will be debited more than the employee gross total because the debit also includes employer taxes and other employer-side costs.

This should be clear in the UI so the employer understands what amount will actually be pulled.

Employer tax details should also be shown clearly so discrepancies can be caught early.

Pay period dropdown

The pay period dropdown does not seem to expand. This may just be because there are no other pay periods available yet, but I wanted to flag it in case it is a UI issue.

Main takeaways

The biggest things I'd focus on are:

- Use as much of the `getPayPeriodDetails` response as possible, especially employee taxes, employer taxes, net pay, and debit total.
- Fix the wage decimal issue so amounts are handled consistently as `dollars.cents`.
- Keep beneficial ownership separate from admin access. The beneficial owner should be the real owner for KYB, while super admin access can be handled on your side.
